MAP Price	\$1,995.00 Each

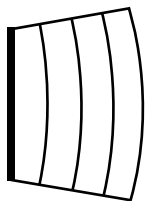

Mounts to standard 1-3/8" tripod stand or optional wall mount bracket

120° Horizontal

5° Vertical

Projection pattern reduces ceiling and floor reflections improving speech intelligibility and acoustical quality in highly reverberant rooms.

Elegant, exceptionally slim, unobtrusive design. Available in black or white powder coat finish. Custom colors on request.

Vertical line arrays have very long projection with consistent listening levels and outstanding resistance to feedback.

A six foot array will fill a medium-size auditorium, church, or club approximately fifty feet, or they may be stacked twelve feet for larger venues up to one hundred feet or more.

Advanced driver with extended bass range and high sensitivity.
